

The Post Standard & Mobile Register add NELA Ternes equipment

St. Paul, MN, June 4, 2002 -- The Post Standard in Syracuse (NY) and the Mobile Register (AL) are two of the latest locations to add plate-handling equipment from NELA Ternes.

Both sites chose similar systems, which include two VCP vision punch/benders for single and doublewide plates connected to two CTP exposure lines.

In both cases the VCP's are interconnected for automatic back up. Both systems are equipped with multiple plate stacking stations, which sort plates according to information contained in a bar code exposed on the plates. The speed of each VCP is 250 plates per hour giving both sites the ability to process a total of 500 plates per hour.

From its headquarters in St. Paul, MN NELA Ternes together with its parent company NELA of Lahr, Germany designs, manufactures, sells and services a complete range of register control and plate handling solutions for the graphic arts industry. Please contact Katharina Rollny for further information.
